

TECHNOLOGY ADVICE TO HELP
OPTIMIZE YOUR BUILDING INVESTMENT

TECHNOLOGY OPTIMIZATION

A great building is more than just concrete, steel and glass. The technology systems, services and infrastructure chosen are also critical to “future-proof” your building.

Via our trusted partners, LindsayTech Client Services combines technology expertise with over 60 years of construction industry leadership to help you navigate the options available - from cloud services and unified communications, to security systems and building controls.

CLOUD SERVICES
BUSINESS VOIP
BUILDING CONTROLS
SECURITY SYSTEMS
VIDEO CONFERENCING
AUDIO VISUAL
ALERT SYSTEMS
CARRIER SERVICES
NETWORKS
CABLING
WIRELESS

Smart Buildings Mean Smart Business

A “smart” building is one that is designed with a capacity to leverage advances in technology and recognizes the evolving impact of IoT (*Internet of Things*). Investing in your building’s technology infrastructure enables integration of smart devices and cloud technologies, which ultimately leads to improved efficiencies, a reduction in operational costs and enhanced market competitiveness.

For new construction projects, selecting technology systems early in the design and building process will help avoid project delays or workplace interruptions, while streamlining product and services delivery.

LindsayTech Client Services will help you identify your unique technology requirements and connect you with the experts.
