

# PRE-ENGINEERED METAL

## BUILDING STRUCTURES

**A balance of design flexibility and economy, pre-engineered metal structures offer long-life finishes, thermal efficiency, low maintenance costs and large clear-span capabilities.**

A metal building is the perfect choice for industrial and commercial facilities for self-storage, recreation, manufacturing, retail, warehousing and more.

**Lindsay Construction is an award-winning leader in the design, build and erection of Pre-Engineered Metal Buildings.**

### VERSATILITY

Pre-engineered metal buildings are highly versatile and adaptable to a variety of cladding and building envelope systems. Standardized components such as framing systems, wall systems, roof systems and other special design options are available in various colors, shapes and textures, enabling us to create a unique structure.

Curved dome and large span metal structures provide an economical, column-free enclosure for recreation centres, arenas, warehouses and more.

### AWARD-WINNING EXPERIENCE

Our in-house design team, experienced field crews and established manufacturer relationship has earned Lindsay Construction both design excellence and sales achievement awards, recognizing our team's outstanding accomplishments as one of the leading contractors in Canada.

**Lindsay Business Management System (LBMS)**  
Committed to quality, safety and productivity.
