

SEAFOOD PROCESSING AND AQUACULTURE

Lindsay Construction provides full facilities design, build and maintenance services for the Canadian seafood processing and aquaculture industry.

From live, fresh and frozen processing plants, to aquaculture facilities and maintenance programs, we have the experience, depth of resources and industry knowledge as the sector's leading building partner.

LINDSAY360

LINDSAY360 offers customized maintenance plans and facility condition assessments to help optimize your processing or aquaculture investment.

COLLABORATIVE APPROACH

Our inclusive approach and depth of self-performing capabilities, including in-house design, engineering and structural construction, enables us to deliver an integrated and cost-effective building experience. Working closely with your team and other industry experts, a facility built *The Lindsay Way* delivers exceptional value and quality.

INDUSTRY EXPERTISE

Building a new processing facility requires more than just a building, it requires an integrated approach to technology, refrigeration, equipment, workflow and an understanding of industry regulations. Our project managers understand these requirements and will work with your team to advise and deliver the best project outcome possible.

SPECIALIZING IN FACILITIES BUILT FOR:

- Live lobster, crab
- Live aquaculture
- International export
- Frozen scallops, IQF
- Cold storage, packaging
- Fresh fish processing

Lindsay Business Management System (LBMS)
Committed to quality, safety and productivity.
