

Higgins Construction, a division of Lindsay Construction, has been delivering water treatment, water storage and wastewater treatment projects to municipal and industrial clients for more than 30 years. This experience has enabled us to become a trusted advisor and building partner to clients offering construction services throughout the entire lifecycle of waterworks projects.

Past projects have included modifications or expansions of existing operational plants, requiring uninterrupted operations as a top priority. Our familiarity with these systems and ability to interface with utility operations teams, while maintaining open communications, is critical.

A high level of experience with installation, integration and commissioning allows us to proactively manage risk.

Delivering project execution excellence is governed by our unique Lindsay Business Management System (LBMS). With a focus on productivity, quality, safety and schedule across every aspect of our operations, we are proud of our solid reputation as a leader in this sector.

LINDSAY360

LINDSAY360 offers facility integrity assessments, value engineering, constructability reviews, maintenance and repair programs.

For more information about our waterworks capabilities and the LINDSAY360 program, contact us today to schedule a consultation.
